

## Is your Storage Optimized for VMware?

*Does your VMware storage infrastructure still meet its requirements for reliability and performance? Are your initial design specifications and assumptions still valid in the face of rapid expansion and growth? Are you prepared for desktop virtualization? Are you prepared to leverage Site Recovery Manager?*

You have no doubt made significant investments to create a more manageable, resilient, and cost-effective server infrastructure through virtualization. Uncontrolled growth and complexity in a VMware environment often result in sub-optimal storage configurations which may no longer perform and scale to initial expectations. Left unchecked, over time these once-effective storage designs and choices may eventually become sources of performance bottlenecks and impediments to scalability.

Vicom Computer Services is a VMware Premier Partner with one of the largest and most successful VMware Practices in the Northeast. We have a large team of highly skilled engineers who work in VMware environments on a daily basis with customers both large and small. In addition, we have a thriving Storage Practice with VMware-trained engineers skilled in nearly every mainstream storage platform on the market. Why not have the best and brightest VMware engineering team in the region take a second look at your storage environment to make recommendations for improvements?

### Health Check Offering

For the past 30+ years, Vicom Computer Services, Inc., has been successfully supporting the needs of large and mid-size firms in their quest to create more efficient IT environments. Let Vicom's Virtualization and Storage Consulting practices work for you in assessing your current VMware storage environment.

Our certified engineers and architects will meet with you on site to get an overview of your VMware environment, storage infrastructure, and your near and long-term plans for growth. The information gathered and our findings and recommendations will be made available to you in an executive summary report. In addition, we will deliver a concise but highly relevant PowerPoint presentation containing our best-practices recommendations for creating a more optimized VMware storage environment that meets your business objectives and creates a more optimized and efficient infrastructure.

### Value Provided

Vicom's VMware Storage Health Check provides tremendous value for our customers by analyzing how improvements can be made in their current VMware storage and data protection environment. We are able to provide not only VMware best practices, but also guidance on overall storage industry trends and successful strategies that have benefited our existing customers. Let Vicom put our many years of experience to work for you by providing you with analysis of your current VMware storage infrastructure and roadmap for meeting future VMware storage and data protection needs.

### Vicom VMware Storage Health Check Deliverables:

- Summary of alignment with industry-standard storage and storage networking (SAN) best practices
- Summary of alignment with VMware storage and storage networking best practices
- Recommendations for increased efficiencies in the VMware storage environment
- Recommendations for increased performance in the VMware storage environment
- Recommendations for increased data protection and resiliency in the VMware storage environment
