

# Virtual Capacity Assessment

## How do you Optimize Your Virtual Environment?

CIO's and IT Managers of Virtual environments today are facing the same issue and challenge that non-virtualized environments faced years ago:

*How do I create and manage the most efficient Virtualized environment possible?*

IT resources are expensive and additional resources in this economic climate are not always possible. In addition, many Virtual environments today are not reaching the expected efficiency in terms of usage and capacity.

Organizations need ways to take full advantage of existing IT infrastructure without adding additional technology or staff. This requires having an accurate picture of where your Virtual environment stands today as well as being able to accurately predict where it will stand in the future.

Through data-driven modeling, our Virtual Capacity Assessment looks into Virtualized environments and offers specific recommendations on how to take advantage of additional capacity and drive better efficiencies in the datacenter. These efficiencies can create anywhere from 25-50% additional capacity in the Virtual environment, translating into real-world savings that can be dedicated to other IT resources or projects.

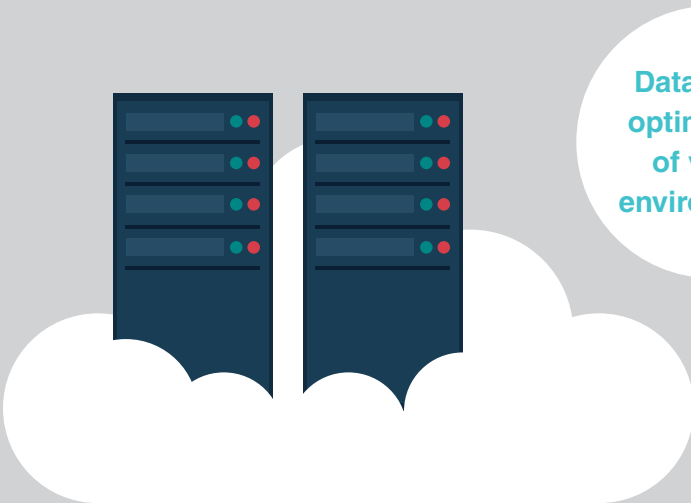

# Virtual Capacity Assessment

**Virtual Capacity Assessment** will create future modeling scenarios based upon current Virtual environments and help in determining how many servers and how much capacity is needed in the future, bringing Data-Driven accuracy and predictability to IT budget planning. This is critical today in this economic environment.

## EXPERTISE

Through our 30+ years of Data Center experience and 10+ years in creating and optimizing Virtual Environments, Vicom helps organizations get more from their Virtual environments.

### Vicom Virtual Capacity Assessment Includes:

Data-driven optimization of virtual environments

Powerful “If/Then” modeling scenarios

Effective and Efficient IT solution implementation

## CONTACT US TODAY

Please contact Vicom today and let us show you how we transform and optimize Virtual environments with our Virtual Capacity Assessment. We can help you navigate through a Virtual world.
