

Is Your Virtual Environment Secure?

Organizations today have embraced Virtualization technologies and solutions for their critical IT and business environments. Why? It makes sense. The technology and solutions are mature, robust, resilient, and secure—even in the most demanding environments. In addition, it's well proven that Virtualization is much more cost effective than non-virtualized computing.

Therefore today it's not a matter of if these technologies are right for organizations, it becomes a matter of how these technologies fit and provide value.

While the technologies and solutions of Virtualization are proven and have been used in all types of production x86 environments for the past 10+ years, many organizations are looking for help to ensure that their virtual environment is as efficient and effective as possible and continually fits the needs organization over time.

Vicom provides Virtualization Services in the following areas:

Planning and
Design of Virtual
Environments

Management

Virtualization Services

Given today's economic climate, IT solutions must provide justifiable value or they will not be considered strategic and will not be considered or implemented. Virtualization is proven to provide near immediate return on investment and cost savings if implemented correctly and if in line with the organizations IT goals and objectives.

When selecting a Virtualization technology provider, ensure that they are proficient in the interdependencies between the various components necessary for Virtualization, in order to be successful and a provide competitive advantage.
